PROJECT SHOWCASE

Contact Directory & Stock Tracker

An integrated solution combining contact management, inventory tracking, and seamless GitHub & Netlify automated deployment.

Repository: contact_stock_netlify

Stack: HTML5 / CSS3 / JavaScript / Netlify

1. Key Application Modules

Dual-purpose system for directory lookup and inventory tracking

📇 Contact Directory Module

- **Centralized Contacts:** Store vendor, customer, and team contact details.
- **Instant Search & Filter:** Quick dynamic filtering across names, emails, and phone numbers.
- **Quick Actions:** Direct email links, phone shortcuts, and category grouping.

📦 Stock Tracker Module

- **Inventory Management:** Track item quantities, unit prices, and stock levels.
- **Low-Stock Alerts:** Visual indicators for items requiring reordering.
- **Category Tagging:** Organize inventory items by product lines and warehouses.

2. Repository Architecture

Clean structure prepared for GitHub hosting and instant deployment

Directory Layout

```
contact_stock_netlify/
├── index.html          # Main dashboard & interface
├── netlify.toml        # Netlify build configuration
├── _redirects          # URL rewrite rules for SPA
├── README.md           # Setup & deployment guide
└── assets/
    ├── app.js          # Directory & Stock tracking logic
    └── style.css       # Custom styling & UI layouts
```

Technical Highlights

- **Lightweight Footprint:** Zero external dependencies for rapid loading.
- **Modular Scripts:** Clear separation between UI presentation (`assets/style.css`) and application logic (`assets/app.js`).
- **Production-Ready:** Pre-configured with rewrite rules to prevent 404 errors during site navigation.

3. Data Workflow & Management

How contacts and stock data interact within the application

1. Data Entry

Users input new contact details or adjust product inventory levels directly through intuitive form controls.

2. Dynamic State

JavaScript processes DOM updates in real-time, refreshing contact cards and inventory tables instantly.

3. Local Persistence

Records are retained in browser storage or connected backend APIs to keep data accessible across sessions.

4. GitHub & Netlify Deployment

Pushing code to GitHub and enabling automated continuous delivery

Git Upload Commands

```
# Initialize & Stage
git init
git add .
git commit -m "Initial commit: Contact & Stock app"

# Link to GitHub & Push
git branch -M main
git remote add origin https://github.com/USER/REPO.git
git push -u origin main
```

Netlify CI/CD Integration

- **Connect Repo:** Link your GitHub repository directly inside the Netlify dashboard.
- **Zero Build Setup:** Set publish directory to `.` (root directory).
- **Auto-Publish:** Every new `git push` automatically rebuilds and deploys updates to live web servers.

5. Summary & System Capabilities

Overview of technical capabilities and project readiness

Feature	Contact Directory	Stock Tracker
Primary Function	Manage team & supplier contacts	Track product inventory & quantities
Search & Filter	Filter by name, group, or email	Filter by product SKU, name, status
Alerts / Status	Active / Inactive contact tags	In Stock / Low Stock warning badges
Deployment Target	**Netlify Web Hosting via GitHub Repository**
